SUMMARY

B.Tech Computer Engineering student with a strong interest in Data Analytics. Skilled in Python, MySQL, Power BI, and Microsoft Excel for data cleaning, analysis, visualization, and reporting. Hands-on experience in developing data-driven dashboards and analyzing business datasets to identify meaningful insights. Strong problem-solving and business understanding with an interest in transforming data into actionable insights and supporting data-driven decision-making.

PROFESSIONAL EXPERIENCE

Power BI Intern 02/2026 – 03/2026

Successfully completed a 4-week Microsoft Elevate internship in collaboration with AICTE, specializing in Power BI for business applications to clean, model, and visualize data for strategic decision-making.

EDUCATION

B.Tech in Computer Engineering 2023 – Present
Savitribai Phule Pune University CGPA : 7.78

Higher Secondary (HSC) 2023
Maharashtra State Board Score : 66.67%

Secondary School (SSC) 2021
Maharashtra State Board Score : 87.60%

SKILLS

Programming : Python, C++, HTML, CSS

Database : MySQL

Data Analytics : Data Cleaning, Data Visualization, Business Problem Solving, Analytical Thinking

Tools : Power BI, Excel, Tableau

CERTIFICATES

- Power BI Workshop (2nd Prize), GDG 2025
- Data Analytics Job Simulation (Deloitte)
- SQL (Simplilearn)
- Data Visualization (TATA - Forage)
- Excel (Oneroadmap)
- Data Fundamentals (IBM)

LANGUAGES

English, Hindi, Marathi

PROJECTS

Ecommerce_Sales_Analysis | MySQL | Power BI 2026

Analyzed e-commerce sales data using MySQL and Power BI to evaluate revenue trends, customer purchasing habits, and product performance. Wrote SQL queries to clean the data, calculate key business metrics, and find top-performing product categories and high-value customers. Built an interactive Power BI dashboard with dynamic filters and DAX measures to track monthly sales, regional revenue, and sales-to-quantity trends, helping support data-driven inventory and marketing decisions.

Customer_behavior_analysis | Python | MySQL | Power BI 2026

Completed an end-to-end data analytics project to study customer shopping patterns, demographic trends, and retention rates using Python, MySQL, and Power BI. Used Pandas and NumPy in Jupyter Notebook to clean raw data, remove duplicates, and handle missing values. Processed the clean data in MySQL using structured SQL queries to aggregate key performance metrics, and built an interactive Power BI dashboard with KPI cards and trend charts to deliver actionable customer insights.

FNP Sales Analysis | Microsoft Excel 2026

Created an interactive Microsoft Excel sales dashboard for Ferns N Petals (FNP) to analyze Rs.95,468 in total revenue across 34 customer orders. Used Pivot Tables, Pivot Charts, and custom calculations to track an average customer spend of RS. 2,807.88 and a 5.47-hour order delivery time. Added interactive slicers to analyze sales peaks in February and August, peak ordering hours, top-selling gift items, and performance across top revenue-generating cities to guide sales and inventory planning.

NGO Volunteer Analytics Dashboard | Power BI 2025

Developed a Power BI dashboard to help NGO managers track volunteer participation, skill distribution, and district locations. Cleaned and formatted Excel/CSV datasets to evaluate volunteer training completion rates, availability schedules, and satisfaction ratings across different experience levels. Designed district map visualizers, data tables, and interactive gender/name slicers to help administrators assign tasks effectively, balance volunteer workloads, and improve team management.
